로그인 및 로그아웃

```
@EnableWebSecurity // springSecurity를 사용하기위한 어노테이
public class SpringSecurityConfig extends WebSecurityConfigurerAdapter {
    private final AuthenticationService authenticationService;
    public SpringSecurityConfig(AuthenticationService authenticationService) {
       this.authenticationService = authenticationService;
    public PasswordEncoder passwordEncoder(){
        return new BCryptPasswordEncoder();
    protected void configure(AuthenticationManagerBuilder auth) throws Exception {
        auth.userDetailsService(authenticationService).passwordEncoder(passwordEncoder());
    public void configure(WebSecurity web){
        web.ignoring().antMatchers("/css/**", "/js/**", "/images/**", "/lib/**");
    protected void configure(HttpSecurity http) throws Exception {
               .authorizeRequests() // 리소스의 권한 설정
               .loginPage("/member/login")
               .usernameParameter("membeId")
               .passwordParameter("memberPwd")
               .logout()
               .logoutRequestMatcher(new AntPathRequestMatcher("/member/logout"))
               .deleteCookies("JSESSIONID")
```

```
\bullet
public static void invalidateSession(HttpServletRequest request, HttpServletResponse response){
        boolean isSecure = false;
       String contextPath = null;
           HttpSession session = request.getSession(false);
            if (session != null) {
           contextPath = request.getContextPath();
        if (response != null) {
           Cookie cookie = new Cookie("JSESSIONID", null);
           String cookiePath = StringUtils.hasText(contextPath) ? contextPath : "/";
           cookie.setMaxAge(0);
            response.addCookie(cookie);
    @Override
   public UserDetails loadUserByUsername(String memberId) {
       log.info("[AuthenticationService] =========
       log.info("[AuthenticationService] memberId : " + memberId);
       MemberDTO member = memberMapper.findByMemberId(memberId);
        log.info("[AuthenticationService] member : " + member);
        return member:
```

```
<!-- 로그인 아이디 찾기 -->
    <select id="findByMemberId" resultType="MemberDTO">
              MEMBER NO
             , MEMBER_ID
             , MEMBER_PWD
             , NICKNAME
            , PHONE
             , EMAIL
            , ADDRESS
            , ENROLL_DATE
            , MEMBER_YN
            , MEMBER_ROLE
         FROM MEMBER
        WHERE MEMBER YN = 'Y'
         AND MEMBER_ID = #{ memberId
    </select>
```

- Spring Security config 및 Session 설정을 하였습니다.
- SessionUtil.invalidateSession()를 사용하여 현재 로그인중인 세션을 초기화 하였습니다.
- UserDetailsService를 재정의하여 로그인 메소드를 구현하였습니다.

회원가입

```
